## Amersfoort Project

The Amersfoort area of the Eastern Transvaal is one of the most prospective areas for CBM with well documented, gassy coal measures. Kinetiko has 49% equity in 2 onshore gas licenses covering 1,874km<sup>2</sup> under a Farm Out agreement with a South African company Badimo Gas Ltd, Kinetiko is the Operator.

Independent Oil and Gas consultant: Gustavson Associates of Boulder Colorado have estimated the Amersfoort licenses have CBM Gas In Place (GIP) Resource of 1.7tcf and 1.12tcf Contingent Resource.

The goal of the Amersfoort Exploration program is to increase Resource certainty; this is largely dependent on Exploration success.

8th December 2011

## DRILLING IS ENCOUNTERING SPONTANEOUS METHANE GAS FLOWS

- Hole KA-06 is spontaneously emitting high volumes of methane gas, several other holes are also releasing gas;
- Permeability Test holes will accurately measure gas bearing sections and gas volumes, planned for completion mid-2012;
- Kinetiko is 60% through its first 8 hole drilling campaign on tenement 56ER, without safety incident;
- Kinetiko's Amersfoort operations have been audited by Gustavson and Associates (Independent Gas Resource specialists) and deemed to align with best industry practice;
- Kinetiko continues to build on its already strong tenure position with granted and applications in highly prospective areas now in excess of 16,000Km<sup>2</sup>

Photograph of KA-06 flaring; total hole depth 366m. Twenty six gassy coal and carbonaceous samples were collected between 190m to 366m.

**Table: Amersfoort Drilling Progress as of 5<sup>th</sup> December 2012**

Hole ID	Status	Depth (M)	# Samples
KA-04C	Completed	425	39
KA-03C	To Re enter	278	5
KA-06C	Completed	366	26
KA-02C	Completed	389	34
KA-05C	Ongoing	203	2
KA-12C	Ongoing	260	9

**Kinetiko signed an MOU with its JV Partner, Badimo Gas, which entitles Kinetiko to a first right of refusal to enter into commercial agreements on Badimo's 7,000Km<sup>2</sup> of land tenure that is under application**

**Kinetiko has also made applications for three TCP's**

**Map of Kinetiko land tenure potential – various applications underway**

Managing Director, Andrew Lambert stated:

*"The presence of methane gas in many of our exploration holes is encouraging. We continue to observe core samples fizzing with gas which we measure over time and we also have methane gas escaping from our cased drill holes – these indicate high permeability within the coal and carbonaceous mudstone layers, which is positive for news for future development."*
